Important Disclosures

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. The ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can adversely affect actual trading results.

"PNTHR NET" returns are fully burdened: all figures are net of IBKR Pro Fixed commissions ($0.005/share), 5 basis points of slippage per leg, sector-tiered short borrow costs (1.0-2.0% annualized), a 2.0% per annum management fee on NAV, and a tiered performance allocation of 20%, 25%, 30% (by investor class) on net profits above a hurdle rate equal to the US 2-Year Treasury Yield, reset annually, subject to a high-water mark with loss carryforward provision. These are the returns an investor would have realized after every cost and fee. Past hypothetical performance is not indicative of future results.

Key Takeaway

At no point during the entire 7-year backtest did the account balance or investor equity decline below prior high-water marks for more than a single month. Even during the months when worst-case MAE trades occurred, the portfolio remained profitable on a net basis. The 1% vitality cap and 35% initial lot sizing ensure that no single adverse trade can materially impair investor capital.

Complete backtest methodology, monthly return heatmaps, drawdown analysis, rolling 12-month returns, and daily NAV logs are available in the Fund Intelligence Report. All backtest data has been internally validated for sector gate compliance and SS crash gate enforcement. Backtest has not been independently audited.
