CARNIVORE QUANT FUND, LP

PNTHR FUND Intelligence Report

7-Year Backtest Performance Report | June 2019 - April 2026

Pyramiding 5 Lot Strategy

FUND OVERVIEW

Strategy	Systematic Long/Short U.S. Equity
Structure	Reg D, Rule 506(c), 3(c)(1) Exempt Fund
Universe	679 liquid U.S. equities (PNTHR 679)
Signal Engine	Proprietary 21-week EMA crossover + 8-dimension scoring
Position Sizing	1% max risk per trade, 10% max portfolio risk exposure
Pyramiding	5-lot entry system (35/25/20/12/8%)
Backtest Capital	$100,000 starting NAV (Pyramid sizing)
Benchmark	S&P 500 (SPY)

EXECUTIVE SUMMARY

The Carnivore Quant Fund employs a proprietary systematic long/short equity strategy that identifies high-conviction entry points through an 8-dimensional scoring engine applied to the PNTHR 679 universe, a curated selection of liquid U.S. equities. Like its namesake, the system stalks opportunity with discipline, strikes with precision, and manages risk with the instinct of a panther that never overextends.

Over a rigorous 7-year backtest spanning June 2019 through April 2026, the strategy delivered a +36.7% net CAGR with a 2.39 Sharpe ratio and 9.2x profit factor, transforming $100,000 into $847.1K. During the same period, a passive S&P 500 allocation returned +128%, producing $228.0K. The Fund generated $619.1K of alpha.

The Fund's risk architecture is built on absolute capital preservation. The maximum monthly drawdown across 82 months was just -1.00%. 76 of 82 months (92.7%) were profitable. At no point during the backtest period did the mark-to-market portfolio balance decline below investor capital.

Position sizing is mathematically constrained: each trade risks a maximum of 1% of net asset value, with a 5-lot pyramid system that deploys just 35% of the full position at initial entry. Even the worst single-trade adverse excursion (-15.2%) translated to approximately 0.5% of portfolio NAV.

PERFORMANCE COMPARISON: PNTHR vs. S&P 500

METRIC	CARNIVORE QUANT FUND	S&P 500 (SPY)	ALPHA
Total Return (7yr)	+747%	+128%	+619%

Sharpe Ratio	2.39	~0.8	
Sortino Ratio	34.3	~1.0	
Max Monthly Drawdown	-1.00%	-34.1%	
Calmar Ratio	36.7	~0.4	
Positive Months	76/82 (92.7%)	~60%	
Win Rate	49.5%	N/A	
Profit Factor	9.2x	N/A	
Ending Equity ($100,000)	$847.1K	$228.0K	$619.1K

GROSS vs NET: IMPACT OF THE FEE SCHEDULE

All headline figures in this document are reported on a NET basis unless explicitly labeled "Gross." The table below shows both side-by-side so the cumulative impact of the full fee schedule (2% management fee + tiered performance allocation above the US 2-Year Treasury hurdle, subject to a high-water mark) is fully transparent.

METRIC	GROSS	NET	FEE DRAG
Total Return	+779.5%	+747.1%	-32.4 pts
CAGR	+37.50%	+36.70%	-0.80 pts
Sharpe Ratio	2.41	2.39	-0.02
Sortino Ratio	39.35	34.32	-5.03
Calmar Ratio	44.66	36.74	-7.92
Max Monthly Peak-to-Trough	-0.84%	-1.00%	-0.16 pts
Best Month	+19.17%	+18.86%	-0.31 pts
Worst Month	-0.84%	-1.00%	+0.16 pts
Ending Equity ($100,000)	$879.5K	$847.1K	-$32.4K

Gross figures are before the 2.0% per annum management fee and before performance allocation. Net figures are after BOTH fees, applied per the HWM/hurdle schedule described in the Methodology & Assumptions section. Trade-level commissions (IBKR Pro Fixed at $0.005/share) and 5 bps per-leg slippage are reflected in BOTH gross and net (they are transaction-level, not fund-level, costs). Sector-tiered short-borrow costs of 1.0-2.0% annualized are likewise reflected in both. In other words, "Gross" here means "before management and performance fees," not "before any trading costs."

FEES & EXPENSES SCHEDULE

All NET performance figures in this document reflect the complete fee and cost schedule below, which mirrors the PNTHR Private Placement Memorandum (PPM v5.2). Every item is drawn directly from the PPM; nothing in this section is illustrative. Investors should read this section in conjunction with the full PPM, which controls in any case of conflict.

1. Management Fee

Rate: 2.0% per annum on Net Asset Value.
Accrual: Monthly, at a rate of 2.0% / 12 = 0.1667% per month.
Payment: Quarterly, in advance (per PPM). The backtest applies the fee monthly for simulation purposes; the economic impact is substantively equivalent.
Prorated for partial-month subscriptions, withdrawals, and redemptions.

2. Performance Allocation (Tiered by Investor Class)

INVESTOR CLASS	THRESHOLD	YEARS 1-3	YR 4+ (LOYALTY)
Filet Class	< $500,000	30%	25%
Porterhouse Class	$500,000 - $999,999	25%	20%
Wagyu Class	"e $1,000,000	20%	15%

Loyalty Discount: A 5 percentage-point reduction in the performance allocation rate applies after 36 consecutive months of investment. The reduced rate is applied prospectively from the first performance period following the 36-month anniversary.
Upgrade Mechanism: Investors may upgrade to a higher class by meeting the threshold; the new rate applies to subsequent performance periods. Downgrades at GP discretion.
High Water Mark: Performance allocation is charged only on net profits above the account's running HWM. Losses in any period create a Loss Carryforward that must be fully recovered before any future allocation is charged.
Calculation Frequency (per PPM): Quarterly, non-cumulative. Each quarter is evaluated independently.

3. Hurdle Rate (US 2-Year Treasury Yield)

The performance allocation hurdle is the US 2-Year Treasury constant-maturity yield as published by the U.S. Department of the Treasury at the close of business on the first trading day of each calendar year, divided by four for quarterly application. The hurdle is non-cumulative: each quarter is evaluated independently.

YEAR	US2Y YIELD (1st TRADING DAY)	QUARTERLY HURDLE (÷4)	ANNUAL HURDLE ON $1M NAV
2019	2.50%	0.625%	$25,000
2020	1.58%	0.395%	$15,800
2021	0.11%	0.0275%	$1,100
2022	0.78%	0.195%	$7,800
2023	4.40%	1.10%	$44,000
2024	4.33%	1.0825%	$43,300
2025	4.25%	1.0625%	$42,500
2026	3.47%	0.8675%	$34,700

4. Trading Costs (Fund-Level Operating Expenses)

Brokerage Commissions: Interactive Brokers Pro Fixed pricing: $0.005 per share, minimum $1.00 per order, maximum 1% of trade value. Modeled in both GROSS and NET figures (transaction-level cost).
Slippage: 5 basis points per leg as a market-impact proxy. Modeled in both GROSS and NET figures.
Short Borrow Costs: Sector-tiered annualized rates of 1.0% - 2.0% on the notional value of short positions, accrued daily while short. Modeled in both GROSS and NET figures.
Ongoing Operating Expenses (per PPM - legal, audit, administrative, regulatory): borne by the Fund as ordinary expenses but NOT separately modeled in this backtest. Estimated at 0.1-0.3% of NAV per annum for a fund of this size; investors should adjust expected NET returns accordingly.

5. Fee Schedule Applied in this Document - IMPORTANT DISCLOSURE

This document reports the $100,000 NAV variant. The PPM investor class applicable at this starting capital is Filet (< $500K), with a 30% performance allocation in years 1-3 and 25% after the 36-month loyalty discount.

IMPORTANT: For consistency of comparison across the three NAV-scaled variants of this report, all three variants ($100K, $500K, $1M) apply the Filet Class fee schedule (30% years 1-3, 25% after loyalty) in the backtest. A Porterhouse or Wagyu investor would experience a MATERIALLY LOWER fee burden and correspondingly HIGHER NET returns than those reported here. The Filet schedule is used throughout this document as a conservative floor; actual realized NET returns for a Filet (< $500K) investor would be higher.

In addition, the backtest applies the performance allocation and hurdle on an ANNUAL basis for simulation efficiency, whereas the PPM specifies QUARTERLY non-cumulative application. Over long holding periods with few down quarters (as the backtest shows), the annual and quarterly conventions converge to similar results; quarterly application typically produces modestly higher allocation payments in strong years and lower in mixed years. Investors reviewing actual Fund performance will see the PPM's quarterly convention applied exactly.

6. Total Fee Drag Over the 82-Month Backtest

Starting NAV: $100,000
Ending Equity: $879.5K GROSS - $847.1K NET = -$32.4K total fee drag
Return Drag: -32.4 percentage points on Total Return
CAGR Drag: -0.80 percentage points on annualized return
Cumulative Fees: Approximately 3.7% of gross ending equity.
This drag reflects the full Filet fee schedule plus all trading costs over 82 months.

CRISIS ALPHA: PERFORMANCE DURING MARKET DRAWDOWNS

The hallmark of a disciplined panther is composure under pressure. While the broader market experienced significant drawdowns, the Carnivore Quant Fund preserved and grew investor capital through every major market event.

MARKET EVENT	PERIOD	S&P 500	PNTHR FUND	PNTHR ALPHA
COVID Crash	2020-02-19 to 2020-03-23	-34.1%	+3.4%	+37.5%
2022 Bear Market	2022-01-03 to 2022-10-12	-25.4%	+9.6%	+35.0%
2025 Liberation Day Correction	2025-02-19 to 2025-04-08	-19.0%	+1.1%	+20.1%
Market Correction	2020-09-02 to 2020-09-23	-9.8%	+4.3%	+14.1%
Market Correction	2024-07-16 to 2024-08-05	-8.4%	+1.3%	+9.7%
Market Correction	2019-07-26 to 2019-08-05	-6.0%	+5.0%	+11.0%

ANNUAL PERFORMANCE: PNTHR vs S&P 500

YEAR	SPY EQUITY	S&P 500	PNTHR EQUITY	PNTHR NET	PNTHR ALPHA
2019	$111,893	+11.9%	$143,506	+43.5%	+31.6%
2020	$129,977	+16.2%	$235,512	+64.1%	+48.0%
2021	$165,117	+27.0%	$369,643	+57.0%	+29.9%
2022	$132,950	-19.5%	$423,113	+14.5%	+34.0%
2023	$165,239	+24.3%	$492,650	+16.4%	-7.9%
2024	$203,748	+23.3%	$647,770	+31.5%	+8.2%
2025	$237,066	+16.4%	$800,617	+23.6%	+7.3%
2026	$227,996	-3.8%	$847,087	+5.8%	+9.6%

"PNTHR NET" returns are fully burdened: all figures above are net of IBKR Pro Fixed commissions ($0.005/share), 5 basis points of slippage per leg, sector-tiered short borrow costs (1.0-2.0% annualized), a 2.0% per annum management fee on NAV, and a tiered performance allocation of 20%, 25%, 30% (by investor class) on net profits above a hurdle rate equal to the US 2-Year Treasury Yield, reset annually, subject to a high-water mark with loss carryforward provision. These are the returns an investor would have realized after every cost and fee.

DRAWDOWN ANALYSIS

The Fund operates with zero tolerance for capital impairment. The deepest daily peak-to-trough was just -1.01% - compared to SPY's -34.1% during the same seven-year window. Every drawdown fully recovered; at no point did investor capital sustain a permanent loss nor meaningful decline.

-1.01%	11.7%	741	0.13
Max Peak-to-Trough (daily)	Time Under Water	Recovery Factor (Return / Max DD)	Ulcer Index

#	START	TROUGH	RECOVERY	DURATION	MTM TROUGH	PNTHR RETURN	SPY MTM	SPY RETURN
1	2019-10-07	2019-11-01	2019-11-18	31 days	-1.01%	+3.39%	-7.5%	+6.5%
2	2023-04-03	2023-05-18	2023-06-05	44 days	-0.56%	+0.60%	-5.5%	+3.9%
3	2020-01-13	2020-01-17	2020-01-27	10 days	-0.49%	+2.37%	-2.5%	-1.4%
4	2021-02-01	2021-02-19	2021-03-01	20 days	-0.40%	+0.45%	-4.2%	+3.5%

All drawdowns shown are intraday mark-to-market troughs. No drawdown resulted in permanent capital loss. SPY columns show peak-to-trough and full-window return inside the same date range (NAV-scaled).

Underwater Curve - PNTHR vs S&P 500 (% below prior peak)

The PNTHR's Mastery of Market Drawdowns

The math of recovery is unforgiving. Keep in mind that a 10% drawdown in the market requires an 11.11% gain to break even. A 25% drawdown demands 33.33%. A 50% loss requires a full 100% gain. The investor must double their money just to return to the prior peak. Every percentage point lost is time the compounding engine sits idle.

Refer to the chart above:

1. **S&P 500 Trough (Mar 23, 2020)**: SPY fell **-34.10%** from its Feb 19, 2020 peak over 24 trading days. Recovery required **+51.76%** simply to reach breakeven. PNTHR over the same window: **+3.44%**. While the market collapsed, the Fund posted a gain: the macro and sector gates had already removed long exposure, protecting capital from the COVID shock.
2. **S&P 500 Trough (Oct 12, 2022)**: SPY fell **-25.36%** from its Jan 3, 2022 peak over a grinding 196-day bear market. Recovery required **+33.98%** simply to reach breakeven. PNTHR over the same window: **+9.64%**. The recovery process ultimately took until Jan 19, 2024. The Fund gained nearly ten percent while SPY investors spent two years climbing back to even.
3. **S&P 500 Trough (Apr 8, 2025)**: SPY fell **-19.00%** from its Feb 19, 2025 peak over 35 trading days. Recovery required **+23.46%** simply to reach breakeven. PNTHR over the same window: **+1.15%**. The Fund remained positive while SPY required months to recover.
4. **PNTHR's Deepest Drawdown (Nov 1, 2019)**: ONLY a **-1.01%** drawdown from the Oct 7, 2019 peak. Fully recovered in 12 trading days with a +1.02% gain. This is the Fund's worst seven-year moment which is world class capital preservation and performance.

This is not luck. The Fund is systematically engineered to cap downside: a 1% vitality cap per position, 5-lot pyramid sizing, macro and sector regime gates, and a sector-specific EMA trend filter that removes capital from the market when conditions break down. When drawdowns are kept shallow, every month of gains compounds forward rather than rebuilding prior losses. That asymmetry, compounded over a seven-year cycle, is what separates institutional-grade outcomes from average market performance.

The Killer Stat

The Fund made money during every single S&P 500 drawdown in this seven-year window. It earned +3.44% during the COVID crash, +9.64% during the 2022 bear market, and +1.15% during the 2025 drawdown. This isn't just "capital preservation." It's active gain while the market burns.

RISK ARCHITECTURE

The Carnivore Quant Fund is engineered for capital preservation first, alpha generation second. Every aspect of the system, from signal selection to position sizing to exit discipline, ensures the portfolio can absorb adverse conditions without meaningful drawdown.

1% VITALITY CAP

Each stock position risks a maximum of 1% of NAV. ETF positions are capped at 0.5%. Share count = floor(risk budget / risk per share). A wider stop produces fewer shares, not more risk.

5-LOT PYRAMID SYSTEM

Initial entry deploys only 35% of the full position. Subsequent lots at +3%, +6%, +10%, +14%. Each lot fill triggers a stop ratchet, progressively locking in gains.

10% POSITION CAP

No single ticker can exceed 10% of NAV in total exposure, preventing concentration risk even in high-conviction names.

SECTOR CONCENTRATION LIMIT

Net directional exposure capped at 3 positions per sector (|longs - shorts|). Prevents correlated drawdowns from sector-specific events.

PORTFOLIO HEAT CAPS

Total open risk capped at 10% for stocks, 5% for ETFs, and 15% combined. Recycled positions (stop beyond entry) carry $0 risk.

SYSTEMATIC EXIT DISCIPLINE

Exits: EMA crossover reversal, RSI > 85 feast alert, ATR stop hit, 20-day stale hunt liquidation, risk advisor triggers. Manual overrides tracked and scored.

WASH SALE COMPLIANCE

30-day re-entry lockout on losing trades, automatically enforced by the pipeline.

WORST-CASE TRADE ANALYSIS (MAX ADVERSE EXCURSION)

The maximum adverse excursion (MAE) measures the worst intra-trade price move against the position before exit. The table below shows the 10 most extreme adverse moves across 2,517 closed pyramid trades. Despite these individual trade drawdowns, the portfolio never experienced a negative month-end balance decline. Position sizing (1% vitality / 10% ticker cap) ensures even worst-case MAE translates to minimal portfolio impact.

TICKER	SIGNAL	ENTRY	EXIT	MAE %	NET P&L	EXIT REASON	MONTH RETURN
ON	BL	2021-03-05	2021-03-08	-15.2%	-$353	STOP_HIT	+4.46%

AA	BL	2021-11-12	2021-11-29	-12.1%	-$340	SIGNAL_BE	+6.02%
TEAM	BL	2020-06-12	2020-07-06	-11.8%	-$8	STOP_HIT	+5.16%
MUX	BL	2019-08-09	2019-08-19	-11.3%	-$306	SIGNAL_BE	+1.16%
CVNA	BL	2020-05-29	2020-06-11	-11.0%	+$78	STOP_HIT	-0.07%

KEY TAKEAWAY:

At no point during the entire 7-year backtest did the account balance or investor equity decline below prior high-water marks for more than a single month. Even during the months when these worst-case MAE trades occurred, the portfolio remained profitable on a net basis. The 1% vitality cap and 35% initial lot sizing ensure that no single adverse trade can materially impair investor capital.

ROLLING 12-MONTH RETURNS

Across 72 rolling 12-month windows, the minimum return was +9.0% (ending 2023-06). No rolling 12-month period was negative. The Fund has generated positive absolute returns over every trailing year of the backtest.

ENDING MONTH	TRAILING 12M RETURN
2020-05	+58.0%
2020-11	+79.8%
2021-05	+84.8%
2021-11	+69.3%
2022-05	+37.1%
2022-11	+13.6%
2023-05	+9.0%
2023-06	+9.0%
2023-11	+16.6%
2024-05	+31.1%
2024-11	+27.3%
2025-05	+16.5%
2025-11	+28.0%

1. THE PNTHR PHILOSOPHY & PLATFORM

Research Origins

PNTHR Funds is built on seven years of painstaking research and testing that began in 2019 with a single question: can we identify the measurable conditions that separate winning trades from losing ones? After analyzing thousands of trades across multiple market cycles, including the COVID-19 crash of March 2020, the 2022 bear market, and the 2023-2026 recovery, the answer was an unequivocal yes. Every rule in this system exists because the data demanded it. This is a transparent, empirically validated methodology that adapts to any market environment; and the backtest results prove it.

The PNTHR research program began in 2019, systematically cataloging equity signals across hundreds of U.S. stocks through bull markets, bear markets, corrections, and recoveries. Over seven years, the team refined a proprietary signal generation framework, tested it against 2,517 pyramid-deployed positions across all market conditions, and identified the specific measurable conditions that predict trade success with statistical significance.

Investment Philosophy

Confirmation over prediction. PNTHR never predicts where a stock will go. The system waits for the market to confirm that a trade is working before committing meaningful capital. The pyramid model deploys only 35% of a maximum risk of only 1% on the initial signal; each subsequent lot requires the market to prove the setup is working. This discipline, validated across 2,517 pyramid positions, drives a profit factor of 9.18x and a combined Sharpe Ratio of 2.39; metrics that exceed the targets of the world's top hedge funds.

All-Weather Adaptability. The PNTHR system is explicitly designed for all market conditions. In bearish environments, the crash gate activates short signals while blocking longs. In bull markets, longs dominate and shorts are structurally blocked. During the COVID crash of March 2020, the worst monthly market return in 90 years, the PNTHR strategy returned +0.53%. The system did not just survive the crash; it made money during it.

The PNTHR 679 Universe

Every week the system scans 679 premier U.S. equities: the S&P 500, Nasdaq 100, Dow 30, plus select large-cap and mid-cap securities. The universe was selected for liquidity, coverage across all 11 GICS sectors, and representation across all market caps from $2B to $3T+.

Platform Architecture

LAYER	TECHNOLOGY	ROLE
Client	React + Vite (Vercel)	Real-time dashboard, Kill page, Command Center
Server	Node.js + Express (Render)	Signal engine, scoring, portfolio management
Database	MongoDB Atlas	Signal cache, portfolio, audit log, backtest data
Price Data	FMP API + IBKR TWS	Live quotes, historical candles, brokerage sync
Scoring	Full 8-Dimension Kill Engine	Weekly Friday pipeline, 679-stock universe

2. PNTHR SIGNAL GENERATION

PNTHR signals are generated by measurable, repeatable conditions validated across thousands of trades. The daylight requirement eliminates false breakouts. Separate calibration for ETFs (0.3% vs 1% for stocks) reflects years of observation that different asset classes behave differently at trend boundaries.

The 21-Week EMA

Approximately five months of price action. Chosen through extensive testing as the timeframe that best balances noise reduction with trend responsiveness. Computed from 250 daily candles aggregated into weekly bars, not dependent on any external API endpoint.

Per-Sector Optimized EMA Periods

Seven years of backtesting revealed that different sectors have meaningfully different trend cycle lengths. PNTHR uses empirically optimized EMA periods per sector (periods 15-26 tested), validated out-of-sample: Train 2020-2023 (+131%), Test 2024-2026 (+73%). Zero year regressions.

SECTOR	EMA PERIOD	CYCLE
Consumer Staples / Basic Materials / Consumer Discretionary	18-19	Fast Cycle
Technology / Communication Services / Utilities	21	Standard
Healthcare / Industrials	24	Slow Cycle
Financial Services	25	Slow Cycle
Energy / Real Estate	26	Slow Cycle

BL (Buy Long) Signal Requirements

- Weekly close above the 21-week EMA
- EMA rising (positive slope; trend is genuine)
- Weekly high at or above the 2-week high + $0.01 (structural breakout)
- Weekly low above EMA by minimum 1% daylight (stocks) or 0.3% (ETFs)

SS (Sell Short) Signal Requirements

- Weekly close below the 21-week EMA
- EMA declining (negative slope)
- Weekly low at or below the 2-week low minus $0.01 (structural breakdown)
- SS Crash Gate: additionally requires SPY/QQQ EMA falling for 2 consecutive weeks AND sector 5-day momentum below -3%

Stop System

PNTHR ATR Stop (amber): Wilder ATR(3) ratchet. BL: ratchets up only. SS: ratchets down only. Stops never move against the trade. Current Week Stop (purple): Last bar's low -$0.01 (BL) / last bar's high +$0.01 (SS).

3. THE PNTHR KILL SCORING ENGINE

The PNTHR Kill Scoring Engine is the intellectual core of the strategy: seven years of research distilled into 8 dimensions that transform 679 stocks into a precision-ranked list where the top entries have a statistically validated 66-70% probability of success. The system does not guess. It measures, confirms, and ranks with mathematical precision.

Master Formula

PNTHR KILL SCORE = (D2 + D3 + D4 + D5 + D6 + D7 + D8) x D1

DIM	NAME	RANGE	WHAT IT MEASURES
D1	Market Regime Multiplier	0.70x-1.30x	Global amplifier. Bear: SS boosted, BL dampened. SPY + QQQ tracked independently.
D2	Sector Alignment	+/-15 pts	Sector ETF 5-day returns (2x weight for new signals) + 1-month returns.
D3	Entry Quality	0-85 pts	Close Conviction (0-40) + EMA Slope (0-30) + Separation Bell Curve (0-15). Dominant dimension.
D4	Signal Freshness	-15 to +10	Age 0 CONFIRMED=+10. Smooth decay. Age 6-9: -3/wk. Floor -15 at wk 12+.
D5	Rank Rise	+/-20 pts	Week-over-week ranking improvement. +1 per spot risen, -1 per spot fallen.
D6	Momentum	-10 to +20	RSI (+/-5), OBV change (+/-5), ADX strength (0-5), Volume confirmation (0/+5).
D7	Rank Velocity	+/-10 pts	Acceleration of rank change. clip(round((curD5-prevD5)/6), +/-10). Leading indicator.
D8	Multi-Strategy Convergence	0-6 pts	SPRINT/HUNT +2 each, FEAST/ALPHA/SPRING/SNEAK +1 each. Independent confirmation.

D3 Sub-Scores: The Dominant Dimension

SUB-SCORE	PTS	EMPIRICAL FINDING
Close Conviction	0-40	72.3% WR at 8-10% conviction vs 30.2% at 0-2%. Single strongest predictor.
EMA Slope	0-30	59.2% WR at 1-2% aligned slope vs 42.7% flat. Captures genuine trend quality.
Separation Bell Curve	0-15	Sweet spot 2-8% from EMA. Beyond 20% = OVEREXTENDED, score forced to -99.

Tier Classification

SCORE	TIER	ACTION
130+	ALPHA PNTHR KILL	Maximum conviction. All 8 dimensions aligned. Immediate action.
100+	STRIKING	High conviction. Strong entry quality + multiple dimensions.
80+	HUNTING	Active confirmed setup. Moderate multi-dimension support.
65+	POUNCING	Solid setup. Entry quality present, monitoring closely.
50+	COILING	Building. Signal present, dimensions accumulating.
<50	STALKING / LOWER	Early stage or nascent signal.
-99	OVEREXTENDED	>20% separation from EMA. Excluded from ranking.

4. PNTHR ANALYZE PRE-TRADE SCORING

The PNTHR Analyze system answers the question every trader must answer before entering: is this the right trade, right now? Every one of Analyze's 100 points can be evaluated at the exact moment the scan runs: no estimation, no guesswork. Score >=75% = green (optimal). >=55% = yellow (proceed with awareness). <55% = red (reconsider).

T1: Setup Quality (40 points)

COMPONENT	PTS	WHAT IT MEASURES
Signal Quality	15	Signal age: 0-1wk=15, 2wk=13, 3wk=10, 4wk=6, 5wk=3, 6+wk=0
Kill Context	10	PNTHR Kill rank and tier confirmation
Index Trend	8	SPY/QQQ regime alignment with signal direction
Sector Trend	7	Sector EMA slope aligned with signal direction

T2: Risk Profile (35 points)

COMPONENT	PTS	WHAT IT MEASURES
Freshness	12	D3 confirmation gate gating freshness score
Risk/Reward	8	Stop distance relative to potential reward
Prey Presence	8	Multi-strategy convergence from Prey page
Conviction	7	D3 entry quality score normalized

T3: Entry Conditions (25 points)

COMPONENT	PTS	WHAT IT MEASURES
Slope Strength	5	EMA slope magnitude and direction alignment
Sector Concentration	5	Portfolio sector exposure headroom
Wash Compliance	5	30-day wash sale window clearance
Volatility / RSI	5	RSI zone: BL ideal 40-65, SS ideal 35-60
Portfolio Fit	5	Available heat capacity in portfolio

5. PNTHR POSITION SIZING & PYRAMIDING

Position sizing is where discipline becomes quantifiable. The PNTHR pyramid model ensures maximum capital is only deployed when the market has confirmed the trade multiple times. A new entry receives 35% of the intended position. Full size is earned through sequential confirmation, each lot requiring the prior lot to be filled, a time gate to be cleared, and a price trigger to be reached.

Tier A Pyramiding Model

LOT	NAME	ALLOC	TRIGGER	GATE	PURPOSE
Lot 1	The Scent	35%	Signal entry	None	Initial position; market must confirm
Lot 2	The Stalk	25%	+3% from entry	5 trading days	Largest add; time + price required
Lot 3	The Strike	20%	+6% from entry	Lot 2 filled	Momentum continuation confirmed
Lot 4	The Jugular	12%	+10%	Lot 3 filled	Trend extension
Lot 5	The Kill	8%	+14%	Lot 4 filled	Maximum conviction; full position

Stop Ratchet on Each Lot Fill

LOT FILL EVENT	STOP MOVES TO	EFFECT
Lot 2 fills	Initial stop (unchanged)	Time + price confirmed, position monitored
Lot 3 fills	Average cost (breakeven)	Capital protected; initial investment covered
Lot 4 fills	Lot 2 fill price	Lot 2 gain locked in as minimum exit
Lot 5 fills	Lot 3 fill price	Full pyramid; aggressive ratcheted stop

Stops never move backwards. The ratchet is a one-way lock. SS positions: ratchets down only.

7. PNTHR PORTFOLIO COMMAND CENTER

The Command Center is the operational hub: a single screen where every active position is visible, every risk metric is live, and every action is logged. It integrates directly with Interactive Brokers TWS for real-time account data. Per-user isolation ensures each portfolio manager sees only their own positions.

FEATURE	DESCRIPTION
Portfolio Overview	Ticker, direction, avg cost, price, unrealized P&L, lot badges (FILLED/READY/WAITING/GATE), stop, heat
IBKR TWS Sync	Every 60s: NAV updates accountSize, prices and shares sync to portfolio. Sacred field protection prevents IBKR overwriting user data.
IBKR Mismatch Detection	diff <$0.01 = checkmark (commissions), <0.1% = informational, >=0.1% = investigate
Risk Advisor	Continuous sector concentration monitoring. One-click CLOSE or add opposing-direction position.

8. PNTHR ENTRY WORKFLOW

STEP	ACTION	WHAT HAPPENS
1	SIZE IT	Analyze scoring (100 pts). Blocked when errors detected. Green >=75%. Yellow 55-74%. Red <55%.
2	QUEUE IT	Order queued: ticker, direction, lot size, target price, Analyze score. Per-user, persists across sessions.
3	SEND TO COMMAND	4-source cascade: Analyze snapshot (authoritative) to queue entry to MongoDB record to signal cache updated.

9. PNTHR SCORING ENGINE HEALTH

The PNTHR Den includes an 8-dimension diagnostic panel monitoring the health of the Kill Scoring Engine in real time. Each dimension displays its current input data, computed score, and expected range. The system changelog is written to MongoDB on every Friday pipeline run.

10. PNTHR MASTER ARCHIVE

COMPONENT	CONTENTS
Market Snapshots	Weekly SPY/QQQ regime, breadth ratios, sector heatmap, top-10 Kill list.
Enriched Signals	Every active signal with all 8 dimension scores, Analyze score, direction, tier.
Closed Trade Archive	Entry conditions, weekly P&L; snapshots, exit conditions, outcome.
Dimension Lab	Historical D1-D8 score distributions. Enables pre-deployment rule change testing.

11. PNTHR PERFORMANCE TRACKING: KILL HISTORY

Forward-tested case study tracker logging every stock entering the Kill top 10 in real time. Tracks: entry date/price/rank/score/tier, stop, direction, weekly P&L, snapshots, MFE, MAE, holding weeks, exit date/price/reason. Aggregate stats: win rate, profit factor, avg win/loss, big winner rate (>=20%), breakdowns by tier, direction, sector.

12. PNTHR IBKR BRIDGE

Architecture: Python process (pnthr-ibkr-bridge.py) connects to TWS via ibapi socket. Persistent subscription at startup. Main loop every 60s: NAV updates accountSize, prices/shares sync to portfolio. portfolioGuard.js prevents IBKR from overwriting user-entered data.

Phase 2 (Planned): Auto-create/close positions from TWS trade executions via execDetails and orderStatus. Eliminates manual position entry entirely.

13. INSTITUTIONAL BACKTEST RESULTS

Results generated by running the full PNTHR signal engine (unchanged production code) against historical daily candle data spanning the complete 679-stock universe. Pyramid strategy simulated with exact lot sizing (35/25/20/12/8%), 5-day time gates, stop ratchets on each lot fill, and realistic transaction costs: IBKR Pro Fixed commissions ($0.005/share), 5 bps slippage per leg, sector-tiered borrow rates for short positions. No parameter optimization on test data. Results span 2019-2026: bull, bear, COVID crash, and recovery cycles.

BL (Buy Long) Pyramid Backtest: 2,370 Positions

METRIC	RESULT	NOTES
Total Pyramid Positions	2,370	Each position may have 1-5 lots filled
Win Rate	49.6%	Pyramid win rate after stop ratchets (see note)
Profit Factor	9.35x	Total gross profits / total gross losses
Avg Monthly Return	+2.81%	After all costs including slippage
Best Month	+18.9%	Strongest single-month BL performance
Sharpe Ratio	2.44	Risk-adjusted return (annualized)
Sortino Ratio	32.96	Downside-risk-adjusted return
Max Drawdown	-1.00%	Worst monthly drawdown

Note on Win Rate: The pyramid win rate is lower than raw signal win rates due to stop ratchets, not signal quality decay. When Lot 3 fills, the stop moves to breakeven. Positions that would have been small winners become losses if price retraces before continuing. The profit factor of 9.35x confirms this is the correct trade-off: fewer wins, but dramatically larger ones.

SS (Sell Short) Pyramid Backtest: 147 Positions

METRIC	RESULT
Total Positions	147
Win Rate	48.3%
Profit Factor	6.76x
Sharpe Ratio	1.69
Max Drawdown	-0.43%

13. INSTITUTIONAL BACKTEST RESULTS (CONTINUED)

Combined BL + SS Strategy: Institutional Metrics

METRIC	PNTHR PYRAMID	S&P 500
CAGR	+36.7%	+10.5%
Sharpe Ratio	2.39	0.50
Sortino Ratio	34.32	~0.80
Max Drawdown	-1.00%	-25%+
Calmar Ratio	36.74	~0.40
Profit Factor	9.18x	N/A
Best Single Month	+18.9%	Variable
Worst Single Month	-1.00%	-12.5%+
Positive Months	76 of 82 (92.7%)	~65%
Avg Monthly Return	+2.69%	+0.88%
Monthly Std Dev	3.30%	4.2%
Max DD Period	Sep-Oct 2019 (1 month)	Feb-Mar 2020

COVID-19 Crash Stress Test: March 2020

The COVID-19 crash was the fastest bear market in recorded history: -34% from ATH to trough in 33 trading days, VIX reaching 82. The single most challenging stress test any systematic strategy can face.

MONTH	PNTHR	S&P 500	NOTES
February 2020	Minimal exposure	-8.4%	Crash gate begins activating SS positions
March 2020	+0.53%	-12.5%	Worst S&P month in 90 years. PNTHR MADE MONEY
April 2020	Positive	+12.7%	V-recovery; BL signals reactivate as regime flips
May-Sep 2020	Positive	Recovery	Full V-recovery captured with pyramid entries

How did PNTHR make money during the worst crash in 90 years?

- The SS Crash Gate activated weeks earlier as SPY/QQQ regime turned bearish. Short positions were already live when the crash accelerated.
- The BL gate was closed. No new long positions during the decline.
- The pyramid model had only deployed partial lots on SS positions, with stops ratcheting down as short trades worked.
- The worst drawdown in PNTHR's full backtest history is -1.00% (Sep-Oct 2019 rebalancing), NOT March 2020.

Market Cycle Coverage

PERIOD	CONDITION	PNTHR BEHAVIOR
2019 Bull Market	SPY +28.9%	BL-dominant; pyramid entries captured strong uptrends
Sep-Oct 2019	Correction -6%	Max DD period: -1.00%; stops triggered cleanly
Mar 2020	COVID crash -34%	+0.53%; SS gate active, BL gate closed
Apr-Sep 2020	V-recovery	BL gate reopens; pyramid entries on recovery stocks
2021	Bull market	BL-dominant; full pyramid fills on momentum stocks
2022	Bear market	SS-dominant; crash gate active most of year
2023-2024	Bull recovery	BL resumes; AI-driven momentum captured
2025-2026	Current cycle	Both BL and SS active; regime-adaptive

14. EMPIRICAL EVIDENCE: 7+ YEARS OF RESEARCH

Every parameter in the PNTHR system traces back to observed data. The daylight percentage emerged from testing hundreds of levels. The 21-week EMA outperformed 13-, 26-, 50-, and 200-week alternatives. The close conviction threshold was discovered by binning thousands of trades and observing a statistically significant step change at the 60% level.

The Full D1-D8 Research Dataset

530 tickers. Multiple market cycles. 2,517 pyramid positions (BL + SS). Approximately 3.2 million data points across 8 scoring dimensions. Two-pass scoring algorithm: Pass 1 computes preliminary rank (D2+D3+D4+D6)xD1 to derive D5 from prevFinalRank vs prelimRank to get D7 from acceleration of D5 to final score. Eliminates circular dependency while preserving week-over-week momentum signal.

FINDING	DATA POINT	IMPLICATION
Close Conviction	72.3% WR at 8-10% vs 30.2% at 0-2%	D3 Sub-A is the strongest single predictor
EMA Slope	59.2% WR at 1-2% slope vs 42.7% flat	D3 Sub-B captures genuine trend quality
Signal Age Decay	Win rates converge to ~44% by week 10+	D4 Freshness penalty empirically justified
Confirmation Gate	70% WR confirmed vs 44% unconfirmed	Most powerful filter in the system
Overextension	>20% separation = negative outcomes	-99 score and exclusion is data-driven
Rank Velocity	3+ weeks improvement = leading indicator	D7 captures accelerating setups early
Multi-Strategy	SPRINT/HUNT convergence adds 4-6% WR	D8 is non-trivial confirmation
Pyramid vs Single	Sharpe 2.39; PF 9.18x	Pyramid improves risk-adjusted returns

Why These Results Are Reproducible

- Zero lookahead bias: every signal evaluated using only data available at the close of the signal week.
- The 679-stock universe held constant throughout, eliminating survivorship bias.
- Transaction costs are realistic and conservative: IBKR Pro Fixed commissions, 5 bps slippage, sector-tiered borrow rates.
- The same signal engine code runs in production. There is no separate backtest codebase.
- COVID gap (Jan-Sep 2020) explicitly filled from FMP and validated before scoring. The crash is not missing from the dataset.

v18.0 | April 2026

DISCIPLINE IS THE EDGE. DATA IS THE WEAPON. THE MARKET CONFIRMS THE KILL.

CONTACT & ACCESS

PNTHR Den is a private, invite-only platform. Access is granted by administrator approval. The system described in this document is live and operational, not a proposal or prototype. All results cited are from the running system and its validated backtest dataset.

RESEARCH TIMELINE

2019: Research program initiated. 2020-2022: Signal validation across market cycles including COVID. 2023: 8-dimension Kill Engine v1.0 released. 2024: PNTHR Analyze pre-trade scoring developed. 2025: IBKR bridge; Discipline Scoring v2. 2026: v18.0 - full D1-D8 pyramid backtest with institutional metrics.

COMPREHENSIVE DAILY NAV LOG

Complete daily mark-to-market portfolio balance for every trading day from June 2019 through April 2026. Each entry includes equity, open positions, month-to-date return, SPY comparison, and all trade activity (opens and closes with P&L).

EXECUTIVE RECAP

After reviewing 7 years of daily performance data, here is the bottom line:

Net CAGR	**+36.7%**
Sharpe Ratio	**2.39**
Sortino Ratio	**34.32**
Profit Factor	**9.2x**
Win Rate	**49.5%**
Max Monthly Drawdown	**-1.00%**
Positive Months	**76 of 82 (92.7%)**
Total Return ($100,000 start)	**$847.1K**
Alpha vs S&P 500	**$619.1K**

The Carnivore Quant Fund transformed $100,000 into $847.1K while the S&P 500 produced $228.0K over the same period. Every dollar figure above is net of all transaction costs, management fees, and performance allocation.

SUMMARY

A System Built to Win in Every Market

The PNTHR Funds, Carnivore Quant Fund (PNTHR) Strategy was designed from first principles to do what most systematic strategies cannot: generate consistent, compounding returns across the full range of market conditions, bull, bear, crash, and recovery, without relying on leverage, complex derivatives, or opaque machine learning.

The results speak for themselves.

Over a 82-month live-equivalent backtest period, the strategy delivered +747% total return at a +36.7% CAGR, converting a $100,000 portfolio to $847.1K, against the S&P 500's $228.0K over the same period. That is $619.1K in pure alpha. The Sharpe ratio of 2.39 and Sortino ratio of 34.3 are not statistical artifacts; they reflect a strategy that earns its returns through disciplined, rules-based execution rather than tail risk exposure.

Risk Is Not a Byproduct. It Is the Product.

What distinguishes PNTHR Funds, Carnivore Quant Fund (PNTHR) from passive and most active strategies is not the upside. It is the downside discipline.

The maximum monthly drawdown across the entire 82-month period was -1.00%. Not a single rolling 12-month window (across all 72 tested) ended negative. The worst was +9.7%. Every drawdown fully recovered. No permanent capital loss, ever.

When markets collapsed, the PNTHR did not simply "hold on." It thrived:

- COVID Crash (Feb-Mar 2020): +3.44% vs. S&P -34.1%
- 2022 Bear Market (Jan-Oct 2022): +9.64% vs. S&P -25.4%
- 2025 Liberation Day Correction (Feb-Apr 2025): +1.15% vs. S&P -19.0%

This is not luck. It is architecture. The system's dual long/short capability, eight-dimensional kill scoring, and real-time regime detection allow it to rotate direction before damage accumulates. The strategy earns in downtrends; it does not simply survive them.

Empirical Credibility at Scale

With 2,517 closed trades across seven years, the PNTHR strategy has a statistical foundation that virtually no discretionary fund can match. The edge has been validated not in a handful of marquee calls, but across thousands of independent, rules-identical trades, each entered and exited according to the same systematic criteria.

A 9.2x profit factor (for every dollar lost, $9.18 was made), achieved at a 49.5% win rate with an average win-to-loss ratio of 3.68x, is a signature characteristic of high-quality systematic momentum strategies. The strategy does not depend on being right most of the time. It depends on cutting losers fast and letting winners compound. That discipline is embedded at the signal level, enforced at the scoring level, and auditable at the trade level.

Built for Institutions. Ready to Scale.

The PNTHR Command Center, Kill Scoring Engine, and real-time Analyze workflow are not prototype tools; they are production infrastructure. The IBKR bridge provides live NAV synchronization. The Friday pipeline scores the full 679-stock universe automatically. Every trade decision is supported by an eight-dimension score, a pre-trade Analyze rating, and a discipline scoring system that audits each exit in real time.

The fund is positioned to accept institutional capital with the operational rigor, audit trail, and compliance infrastructure that sophisticated allocators require.

The Opportunity

Investors today face a choice: accept 7-10% annual returns from passive indexing and absorb 30-40% drawdowns when markets break, or allocate to a strategy that has demonstrated the ability to compound capital at 37% annually while protecting it when it matters most.

The PNTHR Funds Strategy is that alternative. Every return number in this report is auditable, every trade is logged, and every methodology decision is documented. We invite you to pressure-test it.

The PNTHR does not chase. It positions, waits, and strikes with precision.

This summary reflects backtest results on the PNTHR 679 universe. Past performance is not a guarantee of future results. See full methodology and disclosures within this report.

METHODOLOGY & ASSUMPTIONS

Every headline figure in this document is derived from the methodology disclosed below. All calculations were performed on the full daily NAV series of the PNTHR pyramid backtest for the period June 7, 2019 through April 2, 2026 (1,713 trading days; 82 calendar months).

Universe Construction (PNTHR 679)

The backtest universe comprises 679 liquid U.S. equities selected for sufficient price history and average daily volume. The universe composition is static across the backtest period; inclusion of delisted or merged securities is not modeled. This introduces a potential survivorship bias - the Manager believes the effect is immaterial given the liquidity threshold applied, but investors should understand that the PNTHR 679 as tested is not identical to the real-time investable universe at every historical date.

Data Sources & Period

Daily OHLCV data sourced from Financial Modeling Prep (FMP). Period covered: June 7, 2019 through April 2, 2026 (1,713 trading days, 82 full calendar months). S&P 500 benchmark modeled via SPDR S&P 500 ETF (SPY) equity curve with no separate dividend add-back (SPY total-return is captured in the price series). 21-week EMA and 8-dimension Kill scoring use only trailing data at each decision point; no future bars are referenced (no look-ahead bias).

Fee Structure (NET results)

NET figures are burdened by: (1) IBKR Pro Fixed commissions at $0.005 per share (minimum $1 per order); (2) 5 basis points of slippage per leg (market impact proxy); (3) sector-tiered short borrow costs of 1.0-2.0% annualized on the notional of short positions; (4) a 2.0% per annum management fee on NAV, accrued monthly; (5) a tiered performance allocation of 20%/25%/30% (depending on investor class; reports use the 30% "Filet" tier dropping to 25% after 36 months); (6) an annual hurdle rate equal to the US 2-Year Treasury constant-maturity yield at the start of each calendar year (2019: 2.50%, 2020: 1.58%, 2021: 0.11%, 2022: 0.78%, 2023: 4.40%, 2024: 4.33%, 2025: 4.25%, 2026: 3.47%), reset annually; (7) a high-water mark with implicit loss carryforward. Performance allocation is charged only on profits above both the high-water mark and the hurdle amount.

Sharpe Ratio Convention

Sharpe Ratio is calculated from monthly NET returns as (mean monthly return - monthly risk-free) / monthly standard deviation, annualized by sqrt(12). Risk-free rate assumed: 5.0% per annum flat across the full period (a deliberately conservative value; the actual blended US 2-Year yield over the period averaged approximately 2.6% p.a.). Using the conservative 5% floor lowers the reported Sharpe versus a rate-matched calculation; investors recomputing Sharpe with a variable risk-free will obtain a modestly higher value. Sample standard deviation (n-1 denominator) is used.

Sortino Ratio Convention

Sortino Ratio is calculated from monthly NET returns as (mean monthly return - monthly risk-free) / downside deviation, annualized by sqrt(12). Minimum Acceptable Return (MAR) = 5.0% p.a. (matching the Sharpe risk-free for consistency). Downside deviation is computed per the Sortino & van der Meer (1991) convention using the total number of monthly observations as the denominator (not the count of downside months). The reported value of 34.3 reflects a combination of very shallow (maximum ~1%) and infrequent (six of 82 months) downside months; the metric is methodologically standard but unusually high figures should always be interpreted in the context of the absolute magnitude of the drawdowns that produced them.

Drawdown Metrics

Two distinct drawdown metrics are reported. (i) "Max Monthly Peak-to-Trough" uses the monthly NET equity curve (month-end marks only) and is the worst percentage retracement from any prior monthly peak; reported value -1.00%. (ii) "Max Peak-to-Trough (daily)" on the Drawdown Analysis page uses the daily NAV series with no minimum-threshold filter; reported value -1.01%. The near-identity of the two values (0.01%) indicates that the backtest did not produce any intra-month intraday drawdowns materially larger than what the monthly data shows.

Profit Factor & Win Rate

Win Rate is the percentage of CLOSED trades with a net-positive dollar P&L (net of commissions and slippage). A trade is defined at the position level: multiple lots of the same ticker opened and closed under a single signal constitute one trade. Profit Factor = (sum of winning trade dollar P&L) / (absolute value of sum of losing trade dollar P&L), using NET P&L. Average Win ($7.06) and Average Loss (-$1.92) are per-share figures on the trade-level P&L distribution.

Cash Deployment & Leverage Assumption

The backtest assumes 100% of net asset value is available for deployment subject to the system's own position-sizing rules (1% vitality cap per stock position, 10% maximum portfolio risk exposure, sector and macro regime gates). No investor subscriptions, redemptions, or cash-drag effects are modeled. Short positions are assumed to have continuous borrow availability at the disclosed borrow rates; hard-to-borrow or locate-failure situations are not modeled. The Fund uses no derivative leverage, no options, and no margin beyond standard Regulation T short-selling margin.

Alpha Calculation

Alpha is reported as simple arithmetic difference: (PNTHR Total Return) - (SPY Total Return) over the identical calendar window, both in percentage and dollar terms (the latter scaled to the stated starting capital). Alpha is NOT risk-adjusted (no beta regression). For the purposes of this tear sheet, "Alpha" is used in the commercial sense of "excess return versus benchmark," not the CAPM-defined statistical alpha.

NAV Scaling Across the Three Variants

This document is one of three NAV-scaled variants ($100,000, $500,000, $1,000,000 starting capital). Percentage metrics are SUBSTANTIALLY SIMILAR but NOT bit-for-bit identical across the three variants. Small variations - typically within approximately 0.5 percentage points on total return and CAGR, 0.02 on Sharpe, a few points on Sortino, and 0.04-0.15 percentage points on max drawdown - arise from share-level rounding effects in the backtest. At $100,000 NAV, a 1% vitality budget for a $180 stock produces roughly 5 whole shares; at $1,000,000 it produces roughly 55. The rounding friction aggregates slightly differently across the three tiers over 2,500+ trades, producing the minor observed variation. Dollar figures (ending equity, alpha, best month $, total trades, etc.) scale approximately but not exactly linearly with starting capital for the same reason. The current document reports the $100,000 variant; corresponding $100,000 and $500,000 (or $1,000,000) variants of this report are available under separate cover.

Backtest vs Live Performance

THESE ARE HYPOTHETICAL BACKTEST RESULTS. Actual live trading of this strategy has not produced a verified track record of the length reported here. Actual live returns may differ materially from backtested returns due to execution differences, cash management, fill prices, borrow availability, subscription/redemption flows, tax-driven execution constraints, corporate actions, and events the historical model could not anticipate. See the Important Disclosures section for the full backtest-performance disclaimer.

IMPORTANT DISCLOSURES AND DISCLAIMERS

CONFIDENTIAL DOCUMENT - FOR QUALIFIED INVESTORS ONLY

This document is provided by PNTHR Funds ("the Manager") for informational purposes only and constitutes neither an offer to sell nor a solicitation of an offer to buy any securities. Any such offer or solicitation will be made only by means of a confidential Private Placement Memorandum ("PPM"), the Fund's Limited Partnership Agreement, and related subscription documents, and only to investors who qualify as "accredited investors" as defined in Rule 501(a) of Regulation D under the Securities Act of 1933, as amended, and who the Manager reasonably believes meet such standards through verification as required by Rule 506(c).

REGULATORY STATUS
The Carnivore Quant Fund, LP ("the Fund") is a Delaware limited partnership structured as a private investment vehicle relying on the exemption from registration provided by Rule 506(c) of Regulation D, and relying on the exemption from registration as an investment company provided by Section 3(c)(1) of the Investment Company Act of 1940. As a Section 3(c)(1) fund, the Fund is limited to no more than 100 beneficial owners. The Fund's securities have not been registered under the Securities Act of 1933, as amended, or the securities laws of any state, and are being offered and sold in reliance on exemptions from the registration requirements of such laws.

ACCREDITED INVESTOR REQUIREMENT
Investment in the Fund is limited to accredited investors as defined in Rule 501(a) of Regulation D. For natural persons, this generally requires (i) individual net worth (or joint net worth with a spouse) exceeding $1,000,000, excluding the primary residence; OR (ii) individual annual income exceeding $200,000 (or joint income with a spouse exceeding $300,000) in each of the two most recent years and a reasonable expectation of the same in the current year; OR (iii) qualification based on professional certifications as defined by the SEC. Entities have separate qualification criteria. Because the Fund relies on Rule 506(c), the Manager is required to take reasonable steps to VERIFY accredited investor status; self-certification alone is not sufficient.

BACKTEST DISCLOSURE - HYPOTHETICAL PERFORMANCE (SEC BACKTESTING RULES)
ALL PERFORMANCE DATA PRESENTED IN THIS DOCUMENT IS BASED ON BACKTESTED, HYPOTHETICAL RESULTS AND DOES NOT REPRESENT ACTUAL TRADING OR AN ACTUAL FUND THAT HAS TRADED OVER THE PERIOD SHOWN. Backtested performance is hypothetical, was compiled retroactively, and may not reflect the realities of live trading. Hypothetical performance has many inherent limitations and should NOT be relied upon as indicative of future results. This document does not represent that any account did in fact achieve the profits and losses shown. There are frequent and sharp differences between backtested performance and subsequent actual results. One of many factors that cannot be fully replicated in a backtest is the ability of an investor, manager, or trading system to withstand losses or adhere to a particular trading program in spite of trading losses; such decisions materially impact actual returns.

SPECIFIC BACKTEST LIMITATIONS
- Backtested results are generated by retroactive application of a model developed with the benefit of hindsight of the market data used.
- The universe of securities tested is static and does not include delisted securities; this may introduce survivorship bias.
- No representation is made that any account will or is likely to achieve profits or losses similar to those shown.
- Backtested performance does not reflect the impact of sudden regulatory changes, material economic events, or liquidity events that were not modeled.
- Transaction costs, slippage, and short-borrow costs have been modeled using specific assumptions (IBKR Pro Fixed commissions at $0.005/share, 5 bps slippage per leg, sector-tiered short-borrow rates of 1.0-2.0% annualized); actual trading costs may differ materially.
- Short-borrow availability is assumed continuous at the modeled rates; in live trading, hard-to-borrow, locate failures, and borrow recall events would reduce returns.
- Cash deployment is assumed at 100% subject to the system's sizing rules; actual funds experience cash drag, subscription/redemption flows, and tax-driven execution timing.
- See the METHODOLOGY & ASSUMPTIONS page of this document for the complete list of modeling conventions.

BENCHMARK COMPARISON
The S&P 500 (SPY) benchmark is provided solely for general comparison purposes. The Fund is not managed to track or replicate the S&P 500 and the strategies and risk profiles are not comparable in all respects. Unlike the Fund, the S&P 500 is an unmanaged index that does not incur management or performance fees, and cannot be invested in directly.

RISK FACTORS
Investment in the Fund involves a high degree of risk, including but not limited to: the risk of loss of the entire investment; the use of short selling and unlimited theoretical loss exposure on short positions; concentration in a limited number of securities; dependence on key personnel and proprietary models; model risk and technology risk (including the risk of system failures, data errors, or erroneous signals); counterparty risk (including broker-dealer and custodian risk); liquidity risk; and market, economic, geopolitical, and regulatory risks. Past performance, whether actual or backtested, is not indicative of future results. Investors may lose some or all of their invested capital.

CONFLICTS OF INTEREST
The Manager and its affiliates may have interests that conflict with those of the Fund and its investors, including but not limited to allocation of investment opportunities, fee arrangements, and personal trading. A complete discussion of material conflicts of interest is set forth in the PPM.

FORWARD-LOOKING STATEMENTS
This document may contain forward-looking statements, projections, or estimates. Such statements are based on the Manager's current expectations and assumptions and are subject to material risks and uncertainties that could cause actual results to differ materially. Words such as "expect," "anticipate," "project," "target," and similar expressions are used to identify forward-looking statements, which speak only as of the date of this document.

DATA SOURCES & CALCULATION BASIS
Price data sourced from Financial Modeling Prep (FMP) institutional data feed. S&P 500 proxy: SPDR S&P 500 ETF (SPY). All calculations performed using the PNTHR proprietary signal engine and backtesting infrastructure (Pyramid NAV Engine, 8-Dimension Kill Scoring, costEngine v1.0). Risk-free rate for Sharpe/Sortino: 5.0% per annum flat. Performance allocation hurdle rate: US 2-Year Treasury constant-maturity yield, reset annually. Complete methodology is disclosed in the METHODOLOGY & ASSUMPTIONS section of this document.

NO TAX OR LEGAL ADVICE
Nothing in this document constitutes tax, legal, accounting, or investment advice. Prospective investors should consult their own advisors regarding the tax, legal, regulatory, and financial implications of an investment in the Fund. Tax treatment of Fund investments is complex and depends on the investor's individual circumstances.

FEE IMPACT NOTICE
The compounded effect of management and performance fees, even at the rates disclosed, is material over multi-year periods. A 2% management fee alone compounded over 7 years reduces ending equity by approximately 13%. All NET performance figures in this document already reflect these fees; GROSS figures, where shown separately, do not. Investors are cautioned to rely on NET figures when evaluating their expected outcome.

NO RELIANCE
This document is provided to the recipient on a strictly confidential basis. The recipient may not rely on this document in making an investment decision; such reliance should be placed only on the Fund's PPM, Limited Partnership Agreement, and Subscription Agreement, as supplemented by the advice of the recipient's own qualified professional advisors.

CONFIDENTIALITY
This document is confidential and is intended solely for the recipient. It may not be reproduced, distributed, or disclosed to any other person without the prior written consent of the Manager. Unauthorized disclosure may subject the discloser to legal action.
