Executive Summary

This Fund Intelligence Report v23 consolidates performance data for all three investor classes of PNTHR FUNDS, Carnivore Quant Fund, LP into a single authoritative document. All figures are derived from a full historical backtest of the proprietary PNTHR Signal System across the PNTHR 679 U.S. equity universe from June 2019 through April 2026 (82 months, 1,713 trading days).

The Fund employs a systematic long/short equity strategy using NAV-scaled pyramiding (five-lot entry structure, 35%/25%/20%/12%/8%), 1% vitality cap per equity (0.5% per ETF), 10% per-ticker cap, with entry gated by: (1) the investor's applicable index 21-week EMA (SPY for S&P 500 members, QQQ for Nasdaq-100-only members, MDY for S&P MidCap 400 members), (2) the sector ETF's per-sector-optimized weekly EMA, (3) D2 sector return alignment, and (4) the SS Crash Gate for short positions. Multi-dimensional Kill scoring ranks candidates; top 10 BL and top 5 SS selected per week.

Performance Summary vs S&P 500 (7-Year Backtest, Net of All Fees)

Investor Class	Perf Allocation	Net CAGR	Net Sharpe	S&P 500 CAGR	Alpha
Filet ($100K - $499K)	30% / 25%	+25.81%	1.64	+12.8%	+13.01%
Porterhouse ($500K - $999K)	25% / 20%	+27.73%	1.81	+12.8%	+14.93%
Wagyu ($1M+)	20% / 15%	+29.48%	1.95	+12.8%	+16.68%

Gross vs Net Returns by Investor Class

Returns are presented both before fund-level fees (**GROSS**, post-transaction-costs) and after all fees (**NET**). Gross figures include IBKR Pro Fixed commissions ($0.005/share), 5 basis points of slippage per leg, and sector-tiered short borrow costs (1.0-2.0% annualized). Net figures further include the 2.0% per annum management fee (accrued monthly on NAV) and the class-tiered performance allocation charged quarterly (non-cumulative) on profits above a quarterly hurdle equal to the US 2-Year Treasury yield divided by four, subject to a running High-Water Mark with Loss Carryforward and the 36-month loyalty step-down. Mechanics per PPM sec. 4.1-4.3.

FILET CLASS ($100,000 - $499,999 : 30% / 25% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+823.05%	+375.69%	-447.36 pts
CAGR	+38.48%	+25.81%	-12.67 pts
Sharpe Ratio	2.54	1.64	-0.90
Sortino Ratio	4.59	2.71	-1.88
Calmar Ratio	4.46	2.58	-1.88

Metric	Gross	Net	Fee Drag
Max Drawdown (daily NAV)	-8.63%	-9.99%	-1.36 pts
Best Month	+24.73%	+24.52%	-0.21 pts
Worst Month	-3.22%	-7.11%	-3.89 pts
Profit Factor	11.25x	9.70x	-1.55x
Win Rate	60.77%	50.63%	-10.14 pts
Positive Months (of 83)	69	60	-9
Ending Equity ($100K start)	$923,054	$475,690	-$447,364
Cumulative Mgmt Fees	-	$39,812	
Cumulative Perf Allocation	-	$121,720	

PORTERHOUSE CLASS ($500,000 - $999,999 : 25% / 20% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+836.49%	+427.28%	-409.21 pts
CAGR	+38.77%	+27.73%	-11.04 pts
Sharpe Ratio	2.59	1.81	-0.78
Sortino Ratio	4.71	3.07	-1.64
Calmar Ratio	4.55	2.96	-1.59
Max Drawdown (daily NAV)	-8.52%	-9.36%	-0.84 pts
Best Month	+24.78%	+24.58%	-0.20 pts
Worst Month	-3.13%	-6.07%	-2.94 pts
Profit Factor	11.24x	10.12x	-1.12x
Win Rate	60.67%	50.96%	-9.71 pts
Positive Months (of 83)	68	62	-6
Ending Equity ($500K start)	$4.68M	$2.64M	-$2.05M
Cumulative Mgmt Fees	-	$214,989	
Cumulative Perf Allocation	-	$532,096	

WAGYU CLASS ($1,000,000+ : 20% / 15% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+837.05%	+478.42%	-358.63 pts
CAGR	+38.78%	+29.48%	-9.30 pts
Sharpe Ratio	2.59	1.95	-0.64
Sortino Ratio	4.72	3.39	-1.33
Calmar Ratio	4.56	3.34	-1.22
Max Drawdown (daily NAV)	-8.51%	-8.82%	-0.31 pts
Best Month	+24.80%	+24.59%	-0.21 pts
Worst Month	-3.13%	-5.51%	-2.38 pts
Profit Factor	11.22x	10.14x	-1.08x
Win Rate	60.42%	50.99%	-9.43 pts
Positive Months (of 83)	68	62	-6
Ending Equity ($1M start)	$9.37M	$5.78M	-$3.59M
Cumulative Mgmt Fees	-	$460,404	
Cumulative Perf Allocation	-	$871,688	

Strategy Activity by Direction

BL (Buy Long) and SS (Sell Short) pools generate signals independently, with asymmetric selection (top 10 BL + top 5 SS per week) reflecting the Strategy's structural long bias. Trade-level attribution metrics shown below are invariant to mark-to-market resolution. Portfolio-level CAGR, Sharpe, Sortino, and Max Drawdown for the fully combined strategy are reported on a mark-to-market basis in the Gross vs Net tables above. Based on Wagyu-tier trade log (2,623 initiated / 2,614 closed / 9 still open at backtest cutoff).

Metric	BL (Longs)	SS (Shorts)	Combined
Total Trades	2,460	163	2,623
Closed Trades	2,451	163	2,614
Win Rate	60.4%	50.9%	60.4%
Profit Factor	11.38x	6.22x	11.22x

Crisis Alpha: Performance During Market Drawdowns

While broader market indices experienced significant drawdowns during major crisis events, the Fund preserved and grew capital through the SS Crash Gate short-exposure mechanism combined with strict stop-loss discipline. Values shown on a Gross Fund NAV basis for the periods listed (full-period fee drag is captured in the Gross vs Net tables

above). Periods identified from SPY drawdown events exceeding 5% peak-to-trough.

Market Event	Period	S&P 500	PNTHR Fund	PNTHR Alpha
COVID Crash	2020-02-21 to 2020-03-23	-34.1%	-3.8%	+30.3%
2022 Bear Market	2022-01-05 to 2022-10-12	-25.4%	+11.7%	+37.1%
2025 Liberation Day Correction	2025-02-21 to 2025-04-08	-19.0%	+1.8%	+20.8%
Market Correction	2020-09-03 to 2020-09-23	-9.8%	-4.3%	+5.5%
Market Correction	2024-07-17 to 2024-08-05	-8.4%	-0.1%	+8.3%
Market Correction	2019-07-31 to 2019-08-05	-6.0%	-3.5%	+2.5%

Methodology

Data Sources

Daily OHLCV bars for 14 index / sector ETFs (SPY, QQQ, MDY, XLK, XLE, XLV, XLF, XLY, XLC, XLI, XLB, XLRE, XLU, XLP) and the PNTHR 679 equity universe sourced from Financial Modeling Prep. Historical S&P 500 and Nasdaq-100 constituent membership reconstructed from FMP's historical-constituent endpoints (1,518 S&P 500 events + 436 Nasdaq-100 events). S&P MidCap 400 membership uses MDY ETF current holdings as proxy; historical MidCap 400 membership is not separately reconstructed. Index and sector ETF weekly closes generated via Monday-keyed weekly aggregation of daily bars.

Gate Policy

1. Direction Index Selection (historical membership as of trade entry week): S&P 500 members use SPY; Nasdaq-100-only members use QQQ; S&P MidCap 400-only members use MDY; non-index fallback uses SPY. **2. Index Gate:** BL passes if index close above its 21-week EMA; SS passes if index close below its 21-week EMA. **3. Sector ETF Gate:** each sector ETF is evaluated against a sector-specific trend-filter period. Specific periods are empirically optimized per sector and are proprietary. BL passes if sector ETF close above its filter; SS passes if below. **4. D2 Gate:** stock's sector return score must be non-negative. **5. SS Crash Gate:** for SS only, requires dual confirmation of sustained bearish direction-index momentum and pronounced recent sector weakness. Specific thresholds are proprietary. Top 10 BL and top 5 SS ranked by multi-dimensional Kill score selected per week.

Position Sizing and Pyramiding

NAV-scaled position sizing matches the live Command Center exactly: total shares = floor(min(vitality / risk-per-share, tickerCap / entry-price)) where vitality = NAV x 1.0% (equities) or 0.5% (ETFs), tickerCap = NAV x 10%, risk-per-share = absolute difference between entry price and initial stop. The 5-lot pyramid allocates 35% / 25% / 20% / 12% / 8% of total shares across Lot 1 "The Scent" through Lot 5 "The Kill", with sequential price-based confirmation thresholds for each subsequent lot (specific thresholds proprietary) and a 5-trading-day time gate between Lot 1 and Lot 2.

Fee Engine (PPM sec. 4.1-4.3)

Management Fee: 2.00% per annum accrued monthly on NAV (1/12 of 2% per month). **Performance Allocation:** charged quarterly on March 31 / June 30 / September 30 / December 31, non-cumulative. Applied to the portion of quarter-end NAV exceeding BOTH (a) the running High-Water Mark, and (b) the quarterly hurdle equal to the US 2-Year Treasury yield as of the first trading day of the Fiscal Year divided by four. Class rates: Filet 30% (25% after 36 continuous months of investment), Porterhouse 25% (20% after 36 months), Wagyu 20% (15% after 36 months). Loss Carryforward: if NAV falls below HWM in any period, future allocations are suspended until NAV fully recovers to HWM. Annual hurdle rates used: 2019 = 2.50%, 2020 = 1.58%, 2021 = 0.11%, 2022 = 0.78%, 2023 = 4.40%, 2024 = 4.33%, 2025 = 4.25%, 2026 = 3.47%.

Drawdown Computation

Max Drawdown reported on a daily NAV basis (peak-to-trough over the full 1,713-day backtest window), reflecting institutional best practice and how an investor would experience NAV on daily statements. Monthly Peak-to-Trough (monthly NAV basis) is typically smaller due to aggregation smoothing.

Anticipated Due Diligence Questions

The following addresses questions institutional allocators, family offices, and sophisticated individuals typically raise when reviewing hypothetical backtest performance. These responses represent the Fund's current position and will be supplemented as live track record accumulates.

1. Are these figures hypothetical or from actual live trading?

These figures are entirely **hypothetical backtest results**. The Fund has not yet traded non-affiliated Limited Partner capital. From June 16, 2025 through April 16, 2026 (the Pre-Launch Live Testing Period), the General Partner and principals used their own capital to live-test a *Short-Term Complementary Strategy*, distinct from the Strategy described herein. The Short-Term Complementary Strategy produced cumulative losses of 44.92% borne exclusively by the General Partner; no non-affiliated Limited Partner was exposed. The Strategy presented in this report is operational as of April 17, 2026. All backtest performance is simulated against historical data.

2. What realistic live performance should an investor expect?

Industry convention is that live performance of systematic strategies typically delivers a meaningful haircut versus backtested results due to: (a) execution slippage beyond modeled assumptions; (b) strategy decay as market microstructure evolves; (c) capacity constraints as assets grow; (d) regime change. A reasonable expectation is that live Net CAGR may deliver **roughly half to two-thirds** of the backtest, and live Max Drawdown may be **2-to-4 times larger** than backtested. The Fund makes no guarantee of any specific live-performance outcome. Past hypothetical performance is not indicative of future results.

3. Was the strategy validated out-of-sample?

Per-sector trend-filter periods are empirically calibrated across the January 2020 through April 2026 sub-window of the full backtest. The calibration is supported by three robustness checks: (i) no sector period was selected that caused regression versus the 21-week baseline within any individual calendar year of the calibration window; (ii) no individual sector regressed under its selected period on a full-pipeline basis; and (iii) a split-sample performance comparison between 2020-2023 and 2024-2026 shows consistent improvement in both sub-periods, with cumulative outperformance over the 21-week baseline of approximately +131 percentage points in 2020-2023 and approximately +73 percentage points in 2024-2026.

The backtest reporting window extends from June 16, 2019 through April 16, 2026. The June 2019 through December 2019 portion (approximately seven months; 30 weekly signal cycles; 144 trading days of daily NAV) was added to the historical data set after the per-sector trend-filter calibration was completed and was not used in the calibration. Performance during this period therefore reflects a true held-out out-of-sample period under the selected per-sector parameters.

Important limitation. The 2020-2023 versus 2024-2026 split-sample comparison described above is not a traditional held-out out-of-sample validation. Parameters were selected with visibility to the full 2020-2026 calibration window. Investors should interpret those split-sample figures as robustness indicators, not as independent out-of-sample validation. The multi-dimensional Kill scoring model, pyramid structure, and stop-loss system were developed through iterative backtesting over approximately 7 years of historical data.

4. Is the sample period representative of different market regimes?

The June 2019 through April 2026 sample period (82 months) includes: (a) the COVID-19 pandemic crash of February-March 2020 (SPY -34.1%); (b) the 2022 bear market and inflation regime (SPY -25.4% peak-to-trough); (c) the 2025 Liberation Day tariff correction (SPY -19.0%); (d) bull market periods in 2019, 2021, 2023, and 2024. The period does not include a prolonged range-bound market, a stagflation period, or a credit-driven crisis (as in 2008-2009). Investors should understand that the Strategy's live performance in future regimes, particularly extended range-bound or commodity-supply-shock environments, may differ from backtested results.

5. How are transaction costs modeled?

Costs are applied at the trade level: (a) commissions at Interactive Brokers Pro Fixed pricing ($0.005 per share, $1 minimum per order, 1% of trade value maximum); (b) slippage at 5 basis points per leg as a market-impact proxy; (c) short borrow at sector-tiered annualized rates of 1.0% to 2.0% accrued daily on notional short position value. These costs are reflected in both Gross and Net figures. Ongoing operating expenses (legal, audit, administrative) are borne by the Fund as ordinary expenses and are estimated at 0.1% to 0.3% of NAV per annum; investors should adjust expected Net returns by this amount.

6. Why is the short side proportionally thin (163 of 2,623 trades)?

The SS Crash Gate is deliberately restrictive: short positions are only eligible when the applicable direction-index exhibits sustained bearish momentum AND the stock's sector shows pronounced recent weakness. Specific thresholds are proprietary. This gate is designed to prevent shorting during normal corrections and to concentrate short exposure in genuine market-stress regimes. In prolonged bull markets, short signals are rare by design. In bear markets (e.g., 2022), short signals expand significantly. The asymmetry (top 10 BL + top 5 SS per week maximum) reflects the Strategy's structural long bias, consistent with the long-term upward drift of the U.S. equity market.

7. How does the strategy address capacity constraints?

The Fund targets a maximum of $25,000,000 in aggregate Capital Commitments at this stage, and is limited to 100 beneficial owners under the Section 3(c)(1) exemption. At target capacity and the 1% vitality sizing rule, a full position is approximately $250,000 — well within the liquidity of every ticker in the PNTHR 679 universe (filtered to S&P 500, Nasdaq-100, and S&P MidCap 400 constituents). Future capacity expansion beyond $25M would require review of individual-ticker capacity constraints and may necessitate strategy adjustments.

8. Has the backtest been independently audited?

The backtest has been **internally validated** for gate compliance (historical index membership reconstruction, sector ETF alignment, D2 gate, SS crash gate) and data quality (trade count reconciliation, sector backfill, still-open trade exclusion from metrics). The backtest has **NOT been independently audited by a third-party accounting firm**. The Fund intends to engage Spicer Jeffries LLP as independent auditor upon admission of Limited Partners, and first-year live financial statements will be audited. Investors requiring independent verification prior to subscription should discuss their requirements with the General Partner.

9. How do these numbers compare to industry benchmarks?

Industry long/short equity hedge fund indices (HFRI Equity Hedge, Barclay Long/Short Equity) have produced long-run Net CAGRs in the 6% to 9% range with Sharpe ratios typically between 0.6 and 0.9. Top-tier long-running multi-strategy and equity-focused funds (Citadel Wellington, Millennium, D.E. Shaw) have reported Net CAGRs in the 10% to 20% range with Sharpe ratios in the 1.0 to 2.5 range. The Strategy's backtested Net metrics exceed these benchmarks materially; investors should apply appropriate skepticism given the absence of live track record and should anticipate realized results closer to top-tier industry averages than to the backtest headline.

10. What are the risk controls?

(a) **Position sizing**: 1% of NAV maximum risk per equity position, 0.5% per ETF; (b) **Portfolio heat caps**: 10% gross long exposure, 5% gross short exposure, 15% total; (c) **Per-ticker cap**: 10% of NAV notional; (d) **Stop loss**: Proprietary PNTHR Stop Loss System (PPSLS) with volatility-based ratchet plus structural range stop; stops never loosen; ratchets advance on pyramid lot fills; (e) **Stale position exit**: any position held for 20 trading days without progress is exited regardless of P&L; (f) **Leverage cap**: 2:1 gross exposure maximum; (g) **Material Strategy Change Notice**: any substantive change to the Strategy requires prior written notice to Limited Partners per LPA Section 6.05.

Important Disclosures

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual trading results.

SEC Marketing Rule Notice: This document contains hypothetical performance as defined in Rule 206(4)-1 under the Investment Advisers Act. Hypothetical performance is subject to additional risks and limitations. The fee assumptions, transaction costs, regulatory environment, and data sources used to produce the backtest are described fully in the Methodology section above and in the Private Placement Memorandum.

Regulatory Status: The Fund is offered in reliance on Rule 506(c) of Regulation D; subscriptions are accepted only from investors verified as both Accredited Investors under Rule 501(a) and Qualified Clients under Rule 205-3 of the Investment Advisers Act of 1940. The Fund is exempt from registration under the Investment Company Act of 1940 in reliance on Section 3(c)(1), and is NOT relying on Section 3(c)(7); accordingly, the Fund does not require investors to be Qualified Purchasers. The Fund is limited to 100 beneficial owners.

Not an Offer; Governing Documents: This document is confidential and the property of STT Capital Advisors, LLC. It is provided for informational purposes only and does not constitute an offer to sell or a solicitation of an offer to buy any interest in the Fund. Any such offer or solicitation will be made solely by means of the Private Placement Memorandum (PPM), the Limited Partnership Agreement (LPA), the Subscription Agreement, and related offering documents, each of which contains additional risk factors, fee disclosures, and terms. In the event of any conflict between this document and the PPM or LPA, the PPM and LPA shall govern. Prospective investors must review the complete offering documents prior to any investment decision.

Past Performance: Past hypothetical performance is not indicative of future results. Actual live results may differ materially from backtested results, and such differences may be substantial. Investors may lose some or all of their invested capital.

Risk Factors: An investment in the Fund involves substantial risk, including the risk of total loss of invested capital. Risks include but are not limited to: market risk, liquidity risk, strategy-decay risk, operational risk, key-person risk, tax risk, regulatory risk, cybersecurity risk, and counterparty risk. A complete discussion of risk factors is contained in the PPM Section VIII (Risk Factors). Investors should consult their own legal, tax, and financial advisors before investing.

Data Provenance: All backtest figures are derived from: (a) Financial Modeling Prep historical OHLCV daily bars for 14 index / sector ETFs and the PNTHR 679 equity universe; (b) FMP historical S&P 500 and Nasdaq 100 constituent membership events (1,518 + 436 events respectively); (c) MDY ETF current holdings as proxy for S&P MidCap 400 current membership (historical MidCap 400 membership is not reconstructed); (d) weekly EMA computation at sector-specific trend-filter periods applied to sector ETFs, 21 weeks applied to index ETFs; (e) 1,713 daily NAV observations per class with mark-to-market of open positions. The backtest has not been independently audited.

Performance Metric Conventions. Sharpe Ratio is computed from daily NAV returns using excess return over the US 3-month Treasury Bill, annualized by the square root of 252 trading days. Sortino Ratio is computed from daily NAV returns using Minimum Acceptable Return of zero, annualized by the square root of 252. Maximum Drawdown is peak-to-trough percentage decline measured on daily mark-to-market NAV. Profit Factor and Win Rate are signed at the individual trade level and are invariant to mark-to-market resolution.

Survivorship Bias Disclosure. The backtest universe consists of approximately 679 U.S. listed equities representing the current (April 2026) composition of the S&P 500, Nasdaq-100, Dow Jones Industrial Average, and S&P MidCap 400 indices. Historical price data is sourced from Financial Modeling Prep. Tickers that were delisted, acquired, merged, or otherwise removed from their parent index prior to April 2026 are not represented in the backtest, as historical price data for such tickers is not available in the current data source.
