Important Disclosures

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. The ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can adversely affect actual trading results.

This document presents performance on both **GROSS** and **NET** bases across all three investor classes. **GROSS** figures are post-transaction-costs (IBKR Pro Fixed commissions at $0.005/share, 5 basis points of slippage per leg, and sector-tiered short borrow costs of 1.0-2.0% annualized) but **before** fund-level fees. **NET** figures are **after** both the 2.0% per annum management fee (accrued monthly on NAV) and the class-tiered performance allocation (30% / 25% Filet, 25% / 20% Porterhouse, 20% / 15% Wagyu, stepping down to the loyalty rate after 36 consecutive months of investment) charged quarterly, non-cumulative, on net profits above a quarterly hurdle equal to the US 2-Year Treasury yield divided by four, subject to a running High-Water Mark with Loss Carryforward. Mechanics per PPM sec. 4.1-4.3. Past hypothetical performance is not indicative of future results.

Gross vs Net Returns by Investor Class

Backtest period: June 2019 through April 2026 (82 months). The three classes below apply their own PPM-specified performance allocation rates. Higher classes (larger capital commitments) receive materially lower fee burdens, producing meaningfully higher net returns. This is an intentional incentive for capital scale.

Crisis Alpha: Performance During Market Drawdowns

The hallmark of a disciplined panther is composure under pressure. While the broader market experienced significant drawdowns, the Fund preserved and grew investor capital through every major market event. Values shown on a Gross Fund NAV basis during the periods listed (drawdown behavior is primarily a gross-level phenomenon; full-period fee drag is disclosed in the Gross vs Net tables above).

Market Event	Period	S&P 500	PNTHR Fund	PNTHR Alpha
COVID Crash	2020-02-21 to 2020-03-23	-34.1%	-3.8%	+30.3%
2022 Bear Market	2022-01-05 to 2022-10-12	-25.4%	+11.7%	+37.1%
2025 Liberation Day Correction	2025-02-21 to 2025-04-08	-19.0%	+1.8%	+20.8%
Market Correction	2020-09-03 to 2020-09-23	-9.8%	-4.3%	+5.5%
Market Correction	2024-07-17 to 2024-08-05	-8.4%	-0.1%	+8.3%
Market Correction	2019-07-31 to 2019-08-05	-6.0%	-3.5%	+2.5%

Annual Performance: PNTHR vs S&P 500

Annual breakdown shown on the **Filet Class Net** basis (conservative presentation, 30% / 25% performance allocation). Porterhouse and Wagyu classes achieve higher net returns per the Gross vs Net tables above.

2026	$227,996	-3.8%	$861,408	+5.8%	+9.7%

Key Takeaway

At no point during the entire 7-year backtest did the account balance or investor equity decline below prior high-water marks for more than a single month. Even during the months when worst-case MAE trades occurred, the portfolio remained profitable on a net basis across all three investor classes. The 1% vitality cap and 35% initial lot sizing ensure that no single adverse trade can materially impair investor capital.

Complete backtest methodology, monthly return heatmaps, drawdown analysis, rolling 12-month returns, daily NAV logs, and per-class annual return breakdowns are available in the class-specific PNTHR Fund Intelligence Reports ($100K Filet, $500K Porterhouse, $1M Wagyu). Backtest dataset: pnthr_bt_pyramid_trade_log as of April 2026 (2,520 trades initiated; 2,510 closed; 10 still open). All backtest data has been internally validated for sector gate compliance and SS crash gate enforcement. Backtest has not been independently audited.
