Performance Summary

Carnivore Quant Fund, LP

v1.3 - April 2026 - HYPOTHETICAL BACKTEST

STT Capital Advisors, LLC

CONFIDENTIAL: FOR ACCREDITED INVESTOR / QUALIFIED CLIENT USE ONLY
This document is the property of STT Capital Advisors, LLC
and may not be reproduced or distributed without prior written consent.

Important Disclosures

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. The ability to withstand losses or to adhere to a particular trading program in spite of trading losses are material points which can adversely affect actual trading results.

This document presents performance on both **GROSS** and **NET** bases across all three investor classes. **GROSS** figures are post-transaction-costs (IBKR Pro Fixed commissions at $0.005/share, 5 basis points of slippage per leg, and sector-tiered short borrow costs of 1.0-2.0% annualized) but **before** fund-level fees. **NET** figures are **after** both the 2.0% per annum management fee (accrued monthly on NAV) and the class-tiered performance allocation (30% / 25% Filet, 25% / 20% Porterhouse, 20% / 15% Wagyu, stepping down to the loyalty rate after 36 consecutive months of investment) charged quarterly, non-cumulative, on net profits above a quarterly hurdle equal to the US 2-Year Treasury yield divided by four, subject to a running High-Water Mark with Loss Carryforward. Mechanics per PPM sec. 4.1-4.3. Past hypothetical performance is not indicative of future results.

Gross vs Net Returns by Investor Class

Backtest period: June 2019 through April 2026 (82 months). The three classes below apply their own PPM-specified performance allocation rates. Higher classes (larger capital commitments) receive materially lower fee burdens, producing meaningfully higher net returns. This is an intentional incentive for capital scale.

FILET CLASS ($100,000 - $499,999 : 30% / 25% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+823.05%	+375.69%	-447.36 pts
CAGR	+38.48%	+25.81%	-12.67 pts
Sharpe Ratio	2.54	1.64	-0.90
Sortino Ratio	4.59	2.71	-1.88
Calmar Ratio	4.46	2.58	-1.88
Max Drawdown (daily NAV)	-8.63%	-9.99%	-1.36 pts
Best Month	+24.73%	+24.52%	-0.21 pts
Worst Month	-3.22%	-7.11%	-3.89 pts

Metric	Gross	Net	Fee Drag
Ending Equity ($100K start)	$923,054	$475,690	-$447,364

PORTERHOUSE CLASS ($500,000 - $999,999 : 25% / 20% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+836.49%	+427.28%	-409.21 pts
CAGR	+38.77%	+27.73%	-11.04 pts
Sharpe Ratio	2.59	1.81	-0.78
Sortino Ratio	4.71	3.07	-1.64
Calmar Ratio	4.55	2.96	-1.59
Max Drawdown (daily NAV)	-8.52%	-9.36%	-0.84 pts
Best Month	+24.78%	+24.58%	-0.20 pts
Worst Month	-3.13%	-6.07%	-2.94 pts
Ending Equity ($500K start)	$4.68M	$2.64M	-$2.05M

WAGYU CLASS ($1,000,000+ : 20% / 15% after 36 months)

Metric	Gross	Net	Fee Drag
Total Return	+837.05%	+478.42%	-358.63 pts
CAGR	+38.78%	+29.48%	-9.30 pts
Sharpe Ratio	2.59	1.95	-0.64
Sortino Ratio	4.72	3.39	-1.33
Calmar Ratio	4.56	3.34	-1.22
Max Drawdown (daily NAV)	-8.51%	-8.82%	-0.31 pts
Best Month	+24.80%	+24.59%	-0.21 pts
Worst Month	-3.13%	-5.51%	-2.38 pts
Ending Equity ($1M start)	$9.37M	$5.78M	-$3.59M

Strategy Activity by Direction (Wagyu $1M)

Trade-level attribution metrics at the Wagyu $1M tier. Profit Factor and Win Rate are signed at the individual trade level and are invariant to mark-to-market resolution. Portfolio-level CAGR, Sharpe, and Sortino for the fully combined strategy are reported on a mark-to-market basis in the Gross vs Net tables above.

Metric	BL (Longs)	SS (Shorts)	Combined
Profit Factor	11.38x	6.22x	11.22x
Win Rate	60.4%	50.9%	60.4%
Total Trades	2,460	163	2,623
Closed Trades	2,451	163	2,614

Per-tier trade counts (virtually identical across classes): Filet 2,625 / 2,616 closed / 9 open; Porterhouse 2,623 / 2,614 / 9; Wagyu 2,623 / 2,614 / 9. Backtest period: June 2019 through April 2026 (82 months, 1,713 trading days).

Crisis Alpha: Performance During Market Drawdowns

The hallmark of a disciplined panther is composure under pressure. While the broader market experienced significant drawdowns, the Fund preserved and grew investor capital through every major market event. Values shown on a Gross Fund NAV basis during the periods listed (drawdown behavior is primarily a gross-level phenomenon; full-period fee drag is disclosed in the Gross vs Net tables above).

Market Event	Period	S&P 500	PNTHR Fund	PNTHR Alpha
COVID Crash	2020-02-21 to 2020-03-23	-34.1%	-3.8%	+30.3%
2022 Bear Market	2022-01-05 to 2022-10-12	-25.4%	+11.7%	+37.1%
2025 Liberation Day Correction	2025-02-21 to 2025-04-08	-19.0%	+1.8%	+20.8%
Market Correction	2020-09-03 to 2020-09-23	-9.8%	-4.3%	+5.5%
Market Correction	2024-07-17 to 2024-08-05	-8.4%	-0.1%	+8.3%
Market Correction	2019-07-31 to 2019-08-05	-6.0%	-3.5%	+2.5%

Annual Performance: PNTHR vs S&P 500

Annual breakdown shown on the **Filet Class Net** basis (conservative presentation, 30% / 25% performance allocation). Porterhouse and Wagyu classes achieve higher net returns per the Gross vs Net tables above.

Year	SPY Equity	S&P 500	PNTHR Equity	Filet Net	Alpha
2019	$111,893	+11.9%	$155,678	+55.7%	+43.8%
2020	$129,977	+16.2%	$267,963	+72.1%	+56.0%
2021	$165,117	+27.0%	$384,153	+43.4%	+16.3%
2022	$132,950	-19.5%	$424,735	+10.6%	+30.0%
2023	$165,239	+24.3%	$522,245	+23.0%	-1.3%
2024	$203,748	+23.3%	$648,114	+24.1%	+0.8%

Year	SPY Equity	S&P 500	PNTHR Equity	Filet Net	Alpha
2025	$237,066	+16.4%	$813,796	+25.6%	+9.2%
2026	$227,996	-3.8%	$861,408	+5.8%	+9.7%

Key Takeaway

At no point during the entire 7-year backtest did the account balance or investor equity decline below prior high-water marks for more than a single month. Even during the months when worst-case MAE trades occurred, the portfolio remained profitable on a net basis across all three investor classes. The 1% vitality cap and 35% initial lot sizing ensure that no single adverse trade can materially impair investor capital.

Anticipated Investor Questions

Are these live returns or hypothetical?

Entirely **hypothetical backtest results**. The Fund has not yet traded non-affiliated Limited Partner capital. The Strategy becomes operational for live trading on April 17, 2026.

What realistic live performance should I expect?

Systematic strategies typically deliver a portion of backtested results in live trading due to execution slippage, strategy decay, and capacity effects. A reasonable expectation is live Net CAGR at roughly half to two-thirds of the backtest headline, with live Max Drawdown 2-to-4 times larger than backtested. No specific live outcome is guaranteed.

How do these numbers compare to industry benchmarks?

HFRI Equity Hedge and Barclay Long/Short Equity indices have produced long-run Net CAGRs in the 6-9% range with Sharpe 0.6-0.9. Top-tier multi-strategy and equity hedge funds (Citadel Wellington, Millennium, D.E. Shaw) have produced Net CAGRs in the 10-20% range with Sharpe 1.0-2.5. Backtested Net metrics for this Strategy materially exceed these benchmarks; investors should apply appropriate skepticism pending live track record.

Was the strategy validated out-of-sample?

Per-sector trend-filter periods are empirically calibrated across the January 2020 through April 2026 sub-window of the full backtest. The calibration is supported by three robustness checks: (i) no sector period was selected that caused regression versus the 21-week baseline within any individual calendar year of the calibration window; (ii) no individual sector regressed under its selected period on a full-pipeline basis; and (iii) a split-sample comparison between 2020-2023 and 2024-2026 shows consistent improvement in both sub-periods, with cumulative outperformance over the 21-week baseline of approximately +131 percentage points in 2020-2023 and approximately +73 percentage points in 2024-2026.

The backtest reporting window extends from June 16, 2019 through April 16, 2026. The June 2019 through December 2019 portion (approximately seven months; 30 weekly signal cycles; 144 trading days of daily NAV) was added to the historical data set after the per-sector trend-filter calibration was completed and was not used in the calibration. Performance during this period therefore reflects a true held-out out-of-sample period under the selected

per-sector parameters.

Important limitation. The 2020-2023 versus 2024-2026 split-sample comparison above is not a traditional held-out out-of-sample validation. Parameters were selected with visibility to the full 2020-2026 calibration window. Investors should interpret those split-sample figures as robustness indicators, not as independent out-of-sample validation.

Why is the short side proportionally thin (~6% of trade count)?

The SS Crash Gate restricts short entries to market-stress regimes through dual confirmation of sustained bearish direction-index momentum and pronounced recent sector weakness. Specific thresholds are proprietary. In bull markets, short signals are rare by design. The asymmetric weekly cap (top 10 BL + top 5 SS) reflects the Strategy's structural long bias.

Has the backtest been independently audited?

Internally validated for gate compliance and data integrity; **not** independently audited by a third-party firm. The Fund intends to engage Spicer Jeffries LLP as auditor upon admission of Limited Partners; first-year live financial statements will be audited.

Methodology and Data Provenance

Complete backtest methodology, monthly return heatmaps, per-class annual returns, drawdown analysis, and daily NAV logs are consolidated in the PNTHR Fund Intelligence Report. Backtest dataset: per-tier pyramid trade logs and mark-to-market daily NAV curves as of April 20, 2026 (trade counts: 2,623-2,625 initiated per class; 2,614-2,616 closed; 9 still open excluded from metrics). Gate compliance verified: historical SP500/NDX100 index membership reconstruction via point-in-time event reconstruction; SP400 via MDY ETF holdings proxy; sector ETF evaluated against sector-specific trend-filter periods (specific periods proprietary); D2 gate; SS crash gate. Costs modeled at trade level (IBKR Pro Fixed $0.005/share, 5 basis points slippage per leg, sector-tiered 1.0 to 2.0% short borrow annualized). Fund-level fees applied per PPM Sections 4.1-4.3 (2% per annum management fee accrued monthly; tier-specific performance allocation 20%/25%/30% stepping to 15%/20%/25% after 36 continuous months, calculated quarterly and non-cumulative against US 2-Year Treasury hurdle; running High Water Mark; Loss Recovery Account per PPM Section 8.01(e)).

Performance metric conventions. Sharpe Ratio is computed from daily NAV returns using excess return over the US 3-month Treasury Bill, annualized by the square root of 252 trading days. Sortino Ratio is computed from daily NAV returns using Minimum Acceptable Return of zero, annualized by the square root of 252. Maximum Drawdown is peak-to-trough percentage decline measured on daily mark-to-market NAV. Profit Factor and Win Rate are signed at the individual trade level.

Survivorship Bias Disclosure. The backtest universe consists of approximately 679 U.S. listed equities representing the current (April 2026) composition of the S&P 500, Nasdaq-100, Dow Jones Industrial Average, and S&P MidCap 400 indices. Historical price data is sourced from Financial Modeling Prep. Tickers that were delisted, acquired, merged, or otherwise removed from their parent index prior to April 2026 are not represented in the backtest, as historical price data for such tickers is not available in the current data source.

Important Disclosures

HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN. Hypothetical results are prepared with hindsight, do not involve financial risk, and cannot fully account for market impact or the psychological pressure of actual trading. This document contains hypothetical performance as defined in Rule 206(4)-1 under the Investment Advisers Act (the SEC Marketing Rule).

The Fund is offered in reliance on Rule 506(c) of Regulation D to investors verified as both Accredited Investors under Rule 501(a) and Qualified Clients under Rule 205-3 of the Investment Advisers Act of 1940. The Fund relies on Section 3(c)(1) of the Investment Company Act and is NOT relying on Section 3(c)(7). The Fund is limited to 100 beneficial owners. The backtest has not been independently audited. This document is not an offer; any offer is made solely by the Private Placement Memorandum and Limited Partnership Agreement. In the event of conflict, the PPM and LPA govern. Past hypothetical performance is not indicative of future results. Investors may lose some or all of their capital.
